

300 watt solar panel specifications

300 watt solar panel specifications

We work with a panel of solar experts to create unbiased reviews that empower you to make the right choice for your home. No other solar site has covered renewables as long as EcoWatch, which means we have more data and insider information than other sites.

Most solar panels made for residential customers are larger than 300 watts, but there are plenty of manufacturers who make this size solar panels for RV solar installations, solar applications on boats, light residential use, and more. Below are our top-rated solar panels in the 300-watt size class.

For that reason, Blue Raven Solar developed an innovative solar financing plan that offers in-house, flexible, zero-money-down options. The results speak for themselves, as Blue Raven Solar is now one of the fastest-growing solar companies in the nation and was recently acquired by SunPower. Its BluePower Plus+ plan (exclusive to Blue Raven) mimics the flexible structure of a lease while still providing the greatest benefits of owning your system.

Eligible homeowners enjoy 18 months of solar power before having to pay their first bill. When coupled with the federal solar investment tax credit (ITC), the initial energy savings can offset more than a third of the overall cost of a system before requiring a dollar down.

In contrast, other installers can only offer similar financing through solar leases, PPAs or third-party providers (such as Mosaic or Sunlight). Third-party loan providers can complicate the process, while opting for a loan or PPA will disqualify you from some of solar's biggest benefits (additional property value, federal solar tax credit and local solar incentives).

Solar panels -- even smaller ones that are meant for light use, like 300-watt panels -- can quickly get expensive and push you over your budget. While renewable energy will generally save you money on electricity costs, in the long run, optimizing your panel selection to suit your budget will always be important.

The table below provides a side-by-side pricing comparison of the top five 300-watt solar panels available. Keep in mind that the prices reflected below are very likely not the total you'd pay for fitting home or even an RV with solar panels, as the production from a single panel would be far too low.

Unfortunately, many of the major solar manufacturers -- like SunPower, Tesla, and Panasonic -- no longer make 300-watt panels, as advancements in solar technology have led them to focus on higher-production panels largely for on-grid applications. These larger companies more often have lengthy warranties, so the coverage you'll find for smaller panels will be limited in most cases.

The size of your 300-watt solar panel will depend on the specific model and manufacturer, as the number of

300 watt solar panel specifications

solar cells used and the size of those cells will affect the dimensions. That being said, the average size for a 300W solar panel is around 36 inches by 65 inches.

Panels created with DIY solar energy systems in mind tend to be made with aluminum frames and are kept at a lightweight for easy maneuverability. The table below includes dimensions for the top five brands we've mentioned above.
