

48v lithium golf cart battery

48v lithium golf cart battery

These 36 volt and 48 volt lithium batteries are some of the most powerful batteries on today's market. They offer exceptional speed, acceleration, and value for your golf cart, utility vehicle, AGV, and more.

By combining the power of lithium, Grade A battery cells, and Bluetooth monitoring. With LithiumHub, you're guaranteed 100% US-based support, plus a competitive, no-nonsense 11-year warranty.

Need some help determining exactly which batteries you need for your golf cart, boat, RV, or other application? Let our lithium battery experts help you find the right battery.

Wouldn't it be nice if batteries were smart, like our TVs, cell phones, and home appliances? No need for wishful thinking-- we've made it a reality with our Bluetooth-connected lithium batteries.

With just a few taps on your smartphone, you can see how much power your cart has left, at any time. Our handy app (included) also lets you monitor other vital data. (Data like voltage, temperature, current, and charging status.)

This can come in handy when you've been using your cart all day, but you're heading home--and it's all uphill. Lead acid batteries peter out after discharging 70-75%, but lithium will go strong all day long.

Can a battery be eco-friendly? When it's lithium, it can. Ionic lithium batteries are toxin-free. They never leak so you can store them anywhere, even indoors. Also, since they take less time to charge, they use much less energy than lead-acid batteries.

You can carry more people and more gear without turning your cart into a sloth-mobile. Better yet, you can reach higher speeds without a lot less energy and effort.

Lithium is the Methuselah of batteries. They last around 5,000 cycles, an incredible lifespan for a battery! That's about ten years, depending on how often you charge them (one cycle = one charge). By comparison, lead acid batteries stay in the game for only 400 cycles or 2-6 years. That number may be even less if you fail to pamper them with the constant attention they demand.

So it may cost more than lead acid at first, but a lithium golf cart battery will save you big bucks in the long run. Plus, with a 48v setup, you can always add more batteries in parallel as you go. Get ready for ridiculous longevity and superior performance with the best battery type: lithium.

Yes, you can connect as many batteries as you need in parallel. Since they're made specifically for golf carts, our 48 volt golf cart batteries are drop-in ready. You can install them into your cart's existing hold-down

48v lithium golf cart battery

without modifications. You can also add to your cart's capacity whenever you're ready, even if it's a couple of years down the line.

LiFePO4 batteries have a wide variety of advantages over lead acid and AGM batteries. They're much lighter, for one. And they require no maintenance. They're also cheaper long term, because of greater efficiency and a longer lifespan.
