

550 kWh microgrid energy storage

550 kWh microgrid energy storage

Utilizing the energy management system to accurately coordinate the control of power generation, energy storage and electricity consumption, and flexibly deploying the operation mode of each equipment, it can realize the coordinated control and economic operation of "source-network-load-storage".

Highly intelligent control system design, meets the needs of multi-scene and multi-objective operation, supports local and remote deployment. Modularized design, internal functional equipment can be flexibly configured according to needs, adapting to different application scenarios and power equipment.

When the load is in the low valley, the energy storage battery is charged at the cheaper valley tariff, and when the load is in the peak, the energy storage battery supplies power to the load, realizing the transfer of the peak load, and obtaining revenue from the peak and valley tariffs.

Intelligent monitoring of real-time status
Optimization of electricity consumption strategies
Earnings analysis and report export
Fault and Remote Operation and Maintenance
