

# Ac frequency inverter manufacturer china

Ac frequency inverter manufacturer china

Shenzhen VEIKONG Electric CO. Ltd. a Professional AC drive enterprise which has been specializing in Researching, Manufacturing and Trading high, medium and low voltage frequency inverter, providing our clients with integrated system solutions. We have professional R& D and devoted management team with more than 20 years" experience of theoretical research, product development and quality management.

We adopt SPWM, sensor less vector control and vector and torque control technology in our vfd which has reached the international advanced standard. The products can directly replace or to be equivalent of Europe and America, Japan and other brands, providing customers with a powerful technical support.

It's time to utilize Variable Frequency Drive (VFD) to save significantly on your energy costs and consumption. VFDs can tighten processes, improve production scale, reduce maintenance, and extend the longevity of your equipment.

Variable Frequency Drive (VFD) is an electronic system used to control an AC induction motor. It can help control torque, speed, and motor direction, which smoothly starts and pushes the motor to the desired speed at a controlled acceleration rate.

The device allows you to use a single motor for a variety of procedures and situations that may need different speeds. Unlike fixed frequency supplied by utility power, VFD offers flexibility and cost savings in manufacturing and various industries.

1. AC Motor - commonly, a three-phase induction motor  
2. Main Drive Controller - using solid-state electronics conversion mechanism containing DC-link or filter, switch, and inverter section  
3. Monitoring and Control Interface - providing a way to start and stop the motor, adjust the speed, change direction, etc.

> To control the speed of a manufacturing process  
> To provide a smooth start and vigilant acceleration to operating speed  
> To ensure energy savings, especially in areas where a load's torque and power may vary.  
> To make the process and quality enhancements in applications" acceleration, monitoring, speed, temperature, tension, pressure, and torque  
> To run a motor in specialized patterns to reduce mechanical and electrical stress

Veikong Electric is a professional AC drives manufacturer and global supplier specialized in research, manufacturing, and trading high to low variable frequency drives. Armed with years of experience and a dedicated team, offering a wide array of VFD products, including VFD500-PV solar pump inverter, VFD 530 AC drive, VFD 500M AC drive, VFD 500 AC drive, VFD 550 AC Drive, and bypass soft starter.
