Banjul energy storage investment trends

Battery overproduction and overcapacity will shape market dynamics of the energy storage sector in 2024, pressuring prices and providing headwinds for stationary energy storage deployments. This report highlights the most noteworthy developments we expect in the energy storage industry this year.

BloombergNEF (BNEF) is a strategic research provider covering global commodity markets and the disruptive technologies driving the transition to a low-carbon economy. Our expert coverage assesses pathways for the power, transport, industry, buildings and agriculture sectors to adapt to the energy transition. We help commodity trading, corporate strategy, finance and policy professionals navigate change and generate opportunities. Sign up for our free monthly newsletter ->

The African Energy Chamber (AEC), is proud to announce the release of the AEC Q1 2022 Outlook, "The State of African Energy" - a comprehensive report analyzing the trends shaping both the global and African oil and gas market in 2022

Energy storage is a crucial tool for enabling the effective integration of renewable energy and unlocking the benefits of solar and wind power for emerging markets. But how big is the opportunity, and how imminent?

A new report commissioned byIFC and ESMAPfinds that energy storage deployments in emerging markets are expected to grow 40 percent annually over the coming decade, resulting in about 80 gigawatts of new storage capacity. This will be a significant increase upon the less than 2 GW of capacity currently in place.

The report outlines the principal uses, drivers, and challenges regarding the commercialization of energy storage technologies in low- and middle-income countries, providing a forecast of expected deployments by region and impacts on energy access, grid stability, and other key areas. Technical review was provided by the U.S. Department of Energy"s Clean Energy Investment Center.

Latin America is another attractive market for energy storage development, given the region"s renewable energy roll-out plans - particularly in Mexico, Chile, and Brazil.

In MENA, many countries are looking to deploy large amounts of renewable energy to reduce the amount of domestic fossil fuels used for local power generation - freeing up that fuel to be sold abroad, bringing in

revenue for government programs.

BNEF tracks investment in the global energy transition, covering everything from renewables and nuclear to electrified transport and heat, hydrogen, carbon capture and sustainable materials. Explore the latest trends in our 2024 edition.

Energy Transition Investment Trends is BloombergNEF"s annual review of global investment in the low-carbon energy transition. It covers a wide scope of sectors central to the transition, including renewable energy, energy storage, nuclear, hydrogen, carbon capture, electrified transport and buildings, clean industry, clean shipping and power grids.

In addition to the core "energy transition investment" figures, which focus on the deployment of clean technologies, we also track investment in the clean energy supply chain, VC/PE and public markets investment in climate-tech companies, and for the first time this year, debt issuance for energy transition purposes.
