Basseterre tesla powerwall

We are proud to partner with Tesla to bring energy independence to our customers. Freedom Solar Power(R) is a Tesla Powerwall Premier Certified Installer, which is a special designation only given to Certified Installers who have demonstrated extensive product knowledge, delivering the highest quality installations and expertly-crafted customer experiences.

If you are considering a Tesla Powerwall for your home, let's talk. We have decades of combined experience including more than 5,000 Powerwall installations.

Powerwall 3 storage capacity (size of the storage "tank") is unchanged at 13.5kWh, but the continuous power output of 11.5kW (size of the "pipe" delivering power to and from the unit) is more than 2x the Powerwall 2

There's no doubt that adding the Tesla Powerwall to your home solar power system is a great investment. It's normal for your solar panels to generate more power than you are using during the day. You can store this extra energy in the Powerwall battery, giving you the option to have clean energy available at night when the sun isn't shining.

There are many benefits of the Tesla Powerwall. To see if this system is a good investment with your solar panel system, it's important to look at your energy requirements and consumption patterns.

Once you've decided that you want to move forward with a Powerwall installation, it can be helpful to talk to a solar expert about your unique situation. You can get personalized recommendations to design the ideal system for your home.

If you are looking to pair your solar panels with a reliable home battery backup, so you always have power – even when the sun isn't shining – the market-leading Tesla products are a great option to consider. Tesla is the market leader in solar batteries, and the Powerwall offers a competitive price point compared to other energy storage products on the market.

You may be wondering if a solar battery will save you money. Energy storage prices have fallen 50% in the last year alone and almost 90% over the past decade (source: Wood Mackenzie Power & Renewables and the American Clean Power Association). Still, for most homeowners, the decision to purchase a battery is based more on the desire for protection from power outages and energy independence rather than achieving a financial return. You will have peace of mind knowing you always have access to a reliable solar battery backup.

When you are getting an estimate for your Tesla Powerwall, look at the breakdown for materials and labor, as well as the up to 30% federal tax credit that can dramatically reduce the cost of your system. Also, consider

Basseterre tesla powerwall

the size of your home and normal energy usage. For example, you might need to install multiple Powerwall units if you want enough backup power for the whole home.

The number of Powerwalls that is right for your home depends on your electricity usage and how you're planning to use your stored power (for example, charging your EV at night vs. keeping power during an extended outage, or how much of your normal energy usage you're willing to conserve during an extended outage). We will meet with you to assess your needs and help you make an informed decision.
