Battery recycling solomon islands

HONIARA, the Solomon Islands' most populous city of over 100 thousand people, produces tons of waste every day. And much of this waste is not collected. This uncollected waste leads to blocked waterways and unsightly heaps of rubbish that often line the streets.

Michael Maefiti is a waste entrepreneur and co-founder of Sol Recycling Business, a for-profit social enterprise working to help communities in Honiara recycle their neighborhoods and streets from unmanaged aluminum drink cans waste, and unused car batteries.

Founded in 2023, Sol Recycling Business is now a hugely successful business that has created jobs and improved livelihoods in Honiara and other provinces in the country.

The company provides convenient recycling services to households in Honiara and has also improved livelihoods in local communities through buying and collecting reclaimed waste. Today, the business has a dozen local employees and has opened a standalone retail outlet at the Lord Howe Settlement, next to the Mataniko River in China Town, Central Honiara.

A decade ago, Michael spent nearly 12 years working as a security guard with a private security firm called PEMA Security, where he was tasked to provide safekeeping of the government's Ministry of Mines and Energy's solar project storage facility. However, he left his job and decided to focus on the waste business. Michael sees huge potential in this sector, with the country's growing waste recycling businesses hungry for recycled waste materials due to foreign demand for end products.

"Export takes a month for the ship to reach its destination and another month to get paid. My monthly export goal is two containers. 22 tones in one container are equivalent to two containers," Michael told ENVIRONMENT MEDIA.

"Currently, Sol Recycling uses a trailer bought from Australia and an aluminum cans compactor machine imported from China. Sol Recycling buys a single disposed car battery for \$1.00 per kg, whereas aluminum tin cans for \$4.00 per kg.

"The business has benefited greatly from the utilization of the trailer. In contrast to the past, when they only gathered 20kg, they can now collect almost 600kg every day," he explained.

This is our great initiative as a way to press forward for progress as we identify and see the great need for steady and sustained growth and be more focus on environmental issues in Solomon Islands.

Four Seasons FZE has been involved in helping with Battery Disposal In Solomon Islands at industry-leading

Battery recycling solomon islands

prices. We have just begun this journey and now has years of industry experience in serving you reliable products. We are the buyer as well as the sellers of Plastic Scraps, Metal Scraps, Stocklot Of Paper Rolls, Plastic Film Rolls, Polymers, & Paper Scrap etc. Also we will provide you the waste disposal, management and recycling services.
