## Benefits of energy storage micronesia

Micronesia: (1) the spread of benefits to disadvantaged communities, (2) increased public awareness and local capacity, (3) private sector involvement, and (4) community solutions. The second volume of the National Energy Policy presents the national- and state-level energy action plans necessary to achieve the overall national energy targets.

The country is striving to overcome electricity access needs, reduce high energy costs, and ensure energy security. Currently, almost all of the electricity produced in Micronesia is dependent upon imported petroleum based fossil fuels, with some solar photovoltaic systems in operation.

The country is striving to overcome electricity access needs, reduce high energy costs, and ensure energy security. Currently, almost all of the electricity produced in Micronesia is dependent upon imported petroleum based fossil fuels, with some solar photovoltaic systems in operation.

This report presents the Energy Master Plans for each of the Federated States of Micronesia (FSM), and for the nation. The Master Plans have been developed during the period of unprecedented technological change. The last few years have seen remarkable and disruptive improvements in renewable energy (RE) technologies and battery storage.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided
