

Best electric cars 2022 2023

WIRED said 12 months ago that 2022 was going to be a pivotal year for electric cars. Judging by the 18 models we told you to watch out for, as well as the increasingly long wait lists for new electric vehicles, we were right.

Despite being raised on a steady diet of base-model Hondas and Toyotas--or perhaps because of it--Joey Capparella nonetheless cultivated an obsession for the automotive industry throughout his childhood in Nashville, Tennessee. He found a way to write about cars for the school newspaper during his college years at Rice University, which eventually led him to move to Ann Arbor, Michigan, for his first professional auto-writing gig at Automobile Magazine. He has been part of the Car and Driver team since 2016 and now lives in New York City.

Caleb Miller began blogging about cars at 13 years old, and he realized his dream of writing for a car magazine after graduating from Carnegie Mellon University and joining the Car and Driver team. He loves quirky and obscure autos, aiming to one day own something bizarre like a Nissan S-Cargo, and is an avid motorsports fan.

The best electric cars can get you around without leaving a cloud of pollution in your wake, and choosing between them is harder than ever. If only because there are so many quality electric cars available to buy right now. That includes the likes of the Ford F-150 Lightning, Kia EV6 and others.

Tesla might be the best known electric carmaker, but it's far from the only player in the business. In fact several different rivals offer a range of all-electric cars for you to choose from. So whether you want a simple urban runabout or a performance-tier EV, here are the best electric cars on sale right now.

Granted there's a lot you need to decide on before you choose an electric car. Including whether you should opt for one of the cheapest electric cars, or if the model you want is one of the few electric cars still eligible for the federal tax credit. Plus, if you're still really struggling, be sure to check out our guide to 11 electric cars with the longest range and our guide to whether you should buy an EV or hybrid.

There's an awful lot to like about the Kia EV6. It may not be the fastest electric car out there, nor does it have the longest-lasting battery, but it has just about everything else you could hope for -- including 310 miles of EPA rated range.

In our time with the car, we were happy to see Kia has outfitted the EV6 with a stylish exterior, and a smart interior that's bursting with class and hi-tech features. Not to mention the 350 kW charging, an augmented reality heads-up display, smart parking, vehicle-2-load capabilities, and 17.6 cubic feet of trunk space. That's without the seats being folded down too.
