

Best small wind turbines uk

The SD6 and SD6+ 6kW small wind turbine is our most popular model. It has been the best-selling small wind turbine in the UK and is regarded as the turbine of choice world-wide for over 25 years.

If you can afford one, a small wind turbine is an excellent way to reduce your grid reliance and cut down your carbon emissions. Neither roof-mounted nor standalone wind turbines will become the norm for UK homes, however.

Designed and manufactured in the UK, our small wind turbines include the best selling LE-300 horizontal wind turbine (fully marinised) and the more powerful horizontal turbine, the LE-600. Suitable for harsh locations where a horizontal wind turbine simply couldn't survive prolonged periods of storm force wind, there's the robust and compact ...

A domestic, or home wind turbine, is a device that can turn wind energy into clean electricity for your home. It's like a miniature version of the much bigger wind turbines you've likely seen around the UK, in fields, or just off the coast. The basic science is the same, but home wind turbines are more compact.

Choosing the right small wind turbine for your home, farm, or small business is a significant decision that can lead to substantial energy savings and environmental benefits. This guide provides comprehensive information to help you select the most suitable small wind turbine based on your specific needs, location, and energy goals.

Small wind turbines are typically defined as those with power ratings of up to 100 kW. They are used to generate electricity for individual homes, small businesses, or agricultural settings, often as part of a standalone system or integrated into the local power grid.

Selecting the right small wind turbine involves careful consideration of your energy needs, local wind conditions, site specifics, and economic factors. By thoroughly evaluating these aspects, you can ensure a successful and sustainable wind energy project.

For more detailed information on small wind turbine models, installation services, or to get a personalized consultation, please visit our dedicated sections on WindTurbines .uk. This will help you make an informed decision tailored to your specific requirements and local conditions.

Available as Grid-Tied and Battery Charge, the SD3 is designed with ease of integration in mind. The intelligent design delivers consistently high performance in all wind speeds. Our unique over-speed protection

Best small wind turbines uk

system ensures continuous energy generation during extreme winds which provides better value to users and operators. As wind speeds increase, the SD3 will maintain output and performance compared to alternative wind turbines which need to brake themselves in strong wind conditions.

Internationally recognised for its unrivalled runtime, the SD3 small wind turbine has now accumulated over 25 years in the industry, bringing continuous power to some of the most remote locations on the planet.

There have been over 100 of our SD3 wind turbines operating in The Falkland Islands since 1992. Taking advantage of the strong winds, the turbine blades pitch and cone to ensure a high output even in the fiercest storms.
