

C2 renewable solutions

C2 renewable solutions

C2 Renewable Solutions specialise in providing domestic and commercial clients with a complete turnkey solution for Solar PV, Battery Storage, EV Charging point and Heat Pump technologies in Hampshire, Isle of Wight and beyond.

We genuinely want all C2 clients to be 100% satisfied with their choice to go renewable. We care, and pride ourselves on the level of service that we aim to provide to all clients, regardless of project size.

For our clients, services include specification, design, installation and commissioning. We set out what financial benefits can be expected from an installation; designed and specified to meet their individual needs.

We have many years of experience within the industry, which means we can offer our clients depth of expertise and knowledge in all properties; domestic and commercial, social housing developments, listed buildings, industrial buildings, residential properties, churches, and schools.

Solar panels are generally best installed on roofs with little shading (ideally south facing), however, with technological advancements it is possible to generate a yield from any orientation.

It is unlikely you will require planning permission to install a solar panel system on your property. However, if you live in a conservation area, an area of outstanding beauty, or a listed building please contact us for advice.

We're accredited by, and follow the codes of the industry's leading organisations Micro Certification Scheme (MCS) and the Renewable Energy Consumer Code (RECC).
