

Cape verde utility-scale solar

Cape verde utility-scale solar

Cape Verde's Ministry of Industry, Commerce and Energy of Cape Verde is seeking expressions of interest from engineering, procurement and construction (EPC) companies to develop 10 MW of solar on the country's largest island. The deadline for applications is Nov. 28.

The solar array will be developed in Cidade da Praia, Cape Verde's capital, which is located on the southern coast of the archipelago's largest island, Santiago.

The chosen contractor will design, procure, construct and commission the plant, then operate it for two years, with the work funded by financing from the Climate and Environmental Fund.

Upon completion, the plant will be the country's largest solar project to date. Its largest project currently, both in terms of capacity and efficiency, is a 5 MW solar array on Sal Island that was inaugurated in September.

Figures from the International Renewable Energy Agency (IRENA) show that the islands had 26 MW of cumulative installed solar capacity by the end of 2023, up from 23 MW at the end of 2022.
