

Chins lithium battery reviews

Chins lithium battery reviews

There are many RV owners that have found Chins Batteries to be very good. Of course, they are taking the word of Will Prowse for the level of quality of this battery (watch the video at the end of this post). He was surprised that it was well-built and performed above expectations for the low price.

To learn more about this battery just continue to read our article. It explores this topic so you have the best information on it before you buy a more expensive model. It is said to be very cheap on Amazon when it is available.

So far we have not found anyone saying that these batteries are like China tires. Those tires are said to be bombs and an accident waiting to happen. They are saying they are well pleased with the performance they have received from its use.

There are some people saying these batteries are no good but if the rumor about those people is true, they have never owned or used a Chin battery. This model comes with a built-in battery management system or BMS as well as a high temperature cut off switch/sensor.

It is supposed to handle fast and solar charging, the latter are the ones saying this battery is not good, and It is built to withstand overcharge, an over-discharge, over-current, and short circuit with excellent self-discharge rate.

For those concerned about the environment, this is supposed to be a green battery as it contains no heavy or rare metals inside. The biggest drawback is that it does not come with a low temperature cut-off sensor or capability.

This brand of batteries is made in China, as you would have guessed by the name, and it is made by a company called Enjoybot Technology. This name should be on the back label while the made in China is placed on the front label.

Their website does not list a location and only states that it has a warehouse in California. Their contact information is limited to an email address. It seems that their website is powered by Shopify.

The only information we have been able to dig up about the company that makes this battery is the name we got from the video linked above. We may not have heard it correctly but we are close.

Actually, we did hear correctly, and they are located at Zhangbei Road, Longgang District, Shenzhen, Guangdong, China. They have a different website than the Chin brand but in looking at the batteries they seem to be the same just sold under different brand labels.

Chins lithium battery reviews

You can see their website at this link. As you will note, they are on Shopify as well. Their other website is <https://enjoybot/> and both are more informative than the Chin website.

That stands to reason as the Chin brand is just an alternative name to sell the same battery. The difference between the two is that you have more contact information for Enjoybot Technology than you do with Chin but the latter seems to pay for returns while Enjoybot may not.
