Commercial solar farm companies

Since 2009, NARENCO's industry-leading team has been focused on the design, construction, and operations of utility-scale solar farms. We build long-term partnerships with investors, clients, and landowners like you to produce clean energy and help you meet financial goals.

Consistently recognized by Solar Power World and Bloomberg New Energy Finance as one of the most successful construction firms in the United States, we create quality solar installations that revolutionize the energy market.

Because we own and operate each project for the long-term, when we build a solar project in your area, we become your neighbor and an active member of your community.

Our projects help to drive economic growth in your region, restore the health of the land we steward, and contribute to your community's legacy for generations to come, all while boosting the local tax base.

Silicon Ranch and Mississippi Power worked closely with the City of Hattiesburg, Forrest County, and the Area Development Partnership to bring this 50 MWac facility online.

Silicon Ranch worked with Walton EMC to deliver this project as part of Walton EMC's agreement to supply 100% renewable energy to support Meta's data center operations in Georgia. This 102.5 MWac facility was Meta's first solar project in the state.

This award-winning solar farm "broke the ceiling on solar development in Arkansas" and introduced a unique structure to project development in a challenging environment.

This landmark project was the first ever under TVA's Generation Flexibility Program that is designed to enable local power companies (LPCs) to develop new distributed generation facilities.

Our long-term ownership and integrated business model means we are uniquely equipped to handle and monitor every step of a solar project throughout its lifecycle, from planning to operations to decommissioning.
