When you want to change settings in Windows 11, you usually reach for the Settings app. But the trusty Control Panel still plays an important role during many configuration tasks. Here are several different ways to open it.

One of the easiest ways to launch Control Panel is by using the Start menu. To do so, click the Start button on your taskbar and type "control panel." Click the "Control Panel" icon that appears in the results, and Control Panel will launch immediately.

You can also launch Control Panel from the Run menu. Press Windows+R on your keyboard, and when the Run window pops up, type "control", and then click "OK" or press Enter. Similarly, you can open Control Panel from the Command Prompt or Windows Terminal by typing "control" and pressing Enter.

Once you've opened Control Panel using any of the methods described above, its icon will appear in your taskbar. If you'd like to keep it there so you can launch it from your taskbar later, right-click the Control Panel icon and select "Pin to Taskbar." The next time you'd like to launch Control Panel, click the icon in your taskbar.

You can also add a special desktop icon for Control Panel. To do so, press Windows+i to open Settings, then navigate to Personalization > Themes and click "Desktop Icon Settings." In the Desktop Icon Settings window that opens, place a checkmark beside "Control Panel," and then click "OK." The icon will appear on your desktop. To launch Control Panel, double-click the desktop icon at any time. Good luck!

A control panel enclosure is a box or a cabinet that is specially designed to house a control panel. It keeps the electrical components of a control panel safe from external damage and unauthorized access, which is suitable for indoor and outdoor use.

Control panel enclosure designs differ based on the size of the equipment it is supposed to house as well as other factors such as the preferred mounting style, the need for ventilation, or insulation.

We manufacture control panel enclosures with different IP ratings. The different IP ratings cover needs such as indoor or outdoor installations as well as protection from other unwanted elements like debris or rain. Our team can recommend an ideal IP rating based on the nature of your installation.

We use high-quality materials that are impact and corrosion-resistant. These factors are essential because they ensure that even with regular bumps, movements, or exposure to corrosive substances, the control panel

enclosure will remain intact. It would also keep the electrical components of the control panel safe from damage.

Control box enclosures are applicable in a wide variety of fields such as medicine or data storage. However, the control panels usually have different structures. Subsequently, E-abel control box enclosures have flexible designs that can easily be adapted for different applications or customized with server racks, fans, or other additions.

Fibox enclosures are more than just a watertight box, but are weatherproof enclosing solutions designed to house and protect electronic controls and components in the harshest environments, both indoors and out. Our solutions can withstand the elements and are rated NEMA 4x, while some select series and sizes are rated 6P, enabling them to keep your innovations dry while completely submerged.

ARCA-JIC is the ideal indoor and outdoor electrical enclosure. These UL-listed non-metallic enclosures are weatherproof and ready for anything. Featuring industry-standard dimensions and panels. Precision, injection-molded polycarbonate features excellent chemical resistance and a wide temperature utilization range. This watertight enclosure is available in classic JIC sizes.
