

Cuba electricity market trends

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

While electricity generation has continued to fall and in 2023 was 2.5% lower than in 2022, consumption, far from decreasing, has multiplied. Last year it grew by 8%, with significant increases in both state and residential demand.

The installed electricity generation capacity in Cuba reached 7.76 gigawatts in 2022, an increase on the previous year earlier. This represents the highest figure reported since at least 2014.

Cuba: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

In the presence of Cuba's Vice Prime Minister Ramiro Valdés and the Minister of Energy and Mines Vicente de la O Levy, the results of a study focused on the control and supervision of ...
