

Data center energy storage austria

The documentation and analysis of the market development of selected storage technologies is based on research of the literature, expert interviews, evaluations of available statistics and empirical data collection.

Efficient and reliable energy storage systems are central building blocks for an integrated energy system based 100% on renewable energy sources. Innovative storage technologies and new fields of application for the use of energy storage systems are being researched and demonstrated in practical operations as part of national and international research and development activities.

Photo: ABS4TSO battery storage system: In the ABS4TSO (Advanced Balancing Services for Transmission System Operators) project, intelligent battery storage systems and other rapidly controllable technologies are used to demonstrate ways of stabilizing the domestic and European electricity transmission network of the future. Project Partners: Austrian Power Grid (project coordination), Austrian Institute of Technology (AIT), TU Wien, VERBUND. (see energy innovation austria Issue 1/2021)
