Feature papers represent the most advanced research with significant potential for high impact in the field. A Feature Paper should be a substantial original Article that involves several techniques or approaches, provides an outlook for future research directions and describes possible research applications.

Editor's Choice articles are based on recommendations by the scientific editors of MDPI journals from around the world. Editors select a small number of articles recently published in the journal that they believe will be particularly interesting to readers, or important in the respective research area. The aim is to provide a snapshot of some of the most exciting work published in the various research areas of the journal.

AVSI Foundation, an Italian NGO, has launched a tender to repair a 100 kWp minigrid in the Democratic Republic of the Congo. The project involves replacing the battery energy storage and conversion systems.

## Democratic republic of the congo energy storage applications

Applications are due Nov. 4.

AVSI Foundation has opened a tender for repairs to a 100 kWp minigrid, consisting of solar panels and a hydro unit, in the village of Kashara-Kimomo in South Kivu province, Democratic Republic of the Congo.

The tender details note that work on the minigrid started in December 2020. Malfunctions gradually reduced its performance during the first year, and it no longer supplies energy to the local community.

AVSI is now exercising its right to hire a third-party contractor for remedial work. This will include, but is not limited to, replacing the battery energy storage and conversion systems.

The selected contractor must also conduct a comprehensive analysis of the existing system to identify any additional work needed. The tender states that all work should be completed within six months.
