Electric vehicle policy castries

Explore key policies and measures for EV deployment. The table highlights current as well as announced key policies and measures that support the deployment of electric vehicles (EVs) and zero-emission vehicles (ZEVs) by region and country.

Electric car sales were underpinned with existing policy support and augmented with Covid-related stimulus measures. Prior to the pandemic, many countries were already developing and strengthening e-mobility strategies with key policy measures such as fiscal incentives and making vehicle CO₂ emission standards more stringent.

The Electrification Coalition has long advocated for federal policies to accelerate the adoption of EVs. These policies can be categorized into four core pillars: Purchase incentives. Charging infrastructure funding. Federal fleet electrification funding. EV manufacturing and supply chain funding and programs.

As in recent years, most policies supporting EVs target the electric light-duty vehicle (LDV) segment, for which market maturity is most advanced and vehicle availability greatest. In 2022, more than 90% of global sales of LDVs were covered by policy that encourages EV uptake.

Electric vehicle (EV) technology has emerged as a potential alternative to the internal combustion engine with an increasing variety and volume of electric vehicles sold since the 1990s. 1 Numerous policies and incentives are in place or have been proposed to encourage the

Explore the quick view below, or click the button under the map to view the detailed Policy Dashboard, which allows users to search the full database by state, date enacted and/or policy category to find model policies, explore key topics, conduct comparative analysis of policy language and track progress by individual states.
