

Electric vehicles evs ukraine

Between January and September, Ukraine imported 45,361 passenger electric vehicles (both new and used) worth \$989 million, according to Ukravtoprom, citing data from the State Statistics Service. Used electric vehicles accounted for 72.2% of all imports.

During this nine-month period, 12,619 new electric cars were imported at a value of \$334 million, while 32,742 used electric vehicles were brought in for \$655 million.

As previously reported, over the first 10 months of 2024, more than 44,200 battery-powered vehicles were registered in Ukraine for the first time, with only 20% of them being new.

Dear reader, as all news organizations, we must balance the pressures of delivering timely, accurate, and relevant stories with requirements to fund our business operations.

As a Ukrainian-based media, we also have another responsibility - to amplify Ukraine's voice to the world during the crucial moment of its existence as a political nation.

It's the support of our readers that lets us continue doing our job. We keep our essential reporting free because we believe in our ultimate purpose: an independent, democratic Ukraine.

Twenty years ago, most people hadn't even heard of Ukraine. Today, the country is on everyone's lips and everyone's headlines. War pushed us on the front page. But there are many other things we do that we are proud of - from music and culture to technology.

We need your help to tell the world Ukrainian story of resilience, joy, and survival. If you're willing to back our effort, consider supporting us on Patreon starting from 5\$ per month. We are immensely grateful.
