

Enphase encharge

Enphase encharge

The Enphase Encharge 10? all-in-one AC-coupled LFP storage system is reliable, smart, simple, and safe. It is comprised of three base Encharge 3? storage units, has a total usable energy capacity of 10.08kWh and twelve embedded grid-forming microinverters with 3.84kW power rating. It provides backup capability and installers can quickly design the right system size to meet the needs of both new and retrofit solar customers.

Please note: Installer certification is required. Courses are available online through the Enphase University platform. The estimated completion time is 4-5 hours. Certification is required for system commissioning

Enphase has not only made an effort to offer competitive solutions but offer products with unique value propositions! Namely, the Enphase Encharge batteries work within their suite of products, the Enphase Ensemble. As such, homeowners can alleviate their reliance on the grid with off-the-grid solutions.

The system includes the Encharge 10 or Encharge 3 storage systems (or a combination of both), the Empower smart switch, the Enlighten cloud monitoring platform, and the Envoy combiner. The system is designed to be used with any of the Enphase IQ series of microinverters.

All of these components work together to provide you with instant seamless backup electricity from your grid-tied solar energy system when the grid experiences a grid failure. As we mentioned above, this system is unlike other traditional grid-tied solar energy battery backup systems in that it will still produce energy to power your home even when the grid is down. If there is excess energy being produced beyond what your system is using, the excess will go to the storage system for later use.

The Enphase Encharge pairs well with most any solar panel system, especially if your utility has reduced or removed net metering, time-of-use rates, or demand charges. Installing a storage solution like the Enphase Encharge with a solar system allows you to maintain a sustained power supply during the day or night, as long as you store enough power from your panels during the day.

As with most other battery products, the Enphase Encharge batteries are sized for residential day-to-day use and often paired with a home solar panels array. When your solar panels produce more electricity than you can use in your home, you can store the excess electricity in the battery system instead of sending it back into the grid. Later, when your panels aren't producing enough electricity to meet your home's needs, you can pull from the electricity stored in your battery instead of having to buy it from your utility company.

Enphase describes its batteries as "all-in-one AC-coupled storage systems." They offer various grid-tied functions, including: increasing household solar self-consumption and managing time-of-use (TOU) electricity rates for maximum savings on your electricity bill.

Enphase encharge

The Encharge 10 is actually just three Encharge 3 units built together in a larger, water-tight cover. It obviously provides three times the amount of capacity as the Encharge 3.

Both come with a 10-year limited warranty. They utilize passive cooling techniques, which means there are no fans or moving parts to break. Encharge units are simple to install since they are essentially plug-and-play. They can also interconnect seamlessly with standard household AC wiring. You can combine multiple Encharge units to maximize your energy storage and provide backup for your entire home.

The Enphase Encharge 10™ battery is reliable, smart, simple, and safe. It provides the lowest lifetime energy costs with backup capability for both new and retrofit solar customers. As an installer, you can quickly design the right system size to meet the needs of the homeowner.

Reliable - Proven high-reliability IQ series microinverters. Ten-year limited warranty. Extensive testing. Passive cooling (no moving parts/fans). Smart - Utility TOU optimization. Self consumption. Remote upgrade. Mobile app-based monitoring. Grid-forming capability for backup operation. Simple & Safe - Fully integrated AC battery system. Quick and easy plug-and-play installation. Interconnects with standard household AC wiring. Cells safely tested. Lithium iron phosphate (LFP) chemistry for maximum safety and longevity.
