

Ese group solar energy

Ese group solar energy

All my dealings with the ESE Solar have been a pleasant experience. Talking with staff on the phone, they have been courteous, polite and professional. Their maintenance engineer has been very helpful, providing me with information that decided me to buy another back-up battery for my solar installation. No pushy sales technique here – just facts.

The operator was very considerate and helpful to me and did not try to rush me into agreeing to renew my policy. Everything was explained to me, including the cost etc, and I was happy to renew my policy. A good service.

The company are very friendly but professional in every way. The workers Dave and Callum were very hard working, clean tidy and efficient. Everything was explained to me every step of the way. It’s also comforting to have a phone number with friendly helpful people at the other end to answer any questions that arise along the way. Thankyou ESE

From the first conversation with Ese, I was impressed by their informative, helpful and non- pressurised attitude. Everything occurred as planned, the surveyor turned up on time and the installation went exactly to plan. The only problem was my alarm clock didn't go off and the team were patiently waiting for me to get up! All information was provided at each step of the way. They couldn't have been more helpful. Would definitely recommend them.

I'm very happy to recommend ESE Solar for the supply and installation of solar panels. Dates given for survey, scaffold and solar panel system installation were all as stated and the work was completed in one day. All staff were very pleasant, helpful and tidy.

Want to start enjoying the benefits of renewable green solar energy? Protect yourself from future energy price shocks with solar PV systems from solar panel installers you can trust.

With a full solar panel system installed, you can not only immediately start to reduce your energy bills, but you could also potentially start to earn by selling any excess electricity produced that you don't use back to the grid.

The cost to install domestic solar panels has been reducing in recent years, meaning there has never been a better time to go solar. Make the first steps to see if solar is a suitable option for your home and you could have solar panels installed and be part of the solar revolution.

Our solar PV and battery storage packages start from just ?6,995, but is solar really worth the investment? It's possible with the savings that the cost of your solar system could provide payback within around 11 years, but

this would depend on a number of different factors.

If you work from home or have several people at home (and therefore use more electricity during the day) then your bill savings will be boosted. Charging an electric vehicle or combining your solar PV with other renewable technologies, such as heat pumps or solar hot water systems can also increase your savings.
