While conventional battery chemistries deliver a 7- to 10-year lifecycle before requiring augmentation, ESS's iron flow chemistry delivers 25+ years and unlimited cycling with no capacity fade or degradation.

ESS iron flow batteries reduce the need for fire suppression equipment, secondary containment, or hazmat precautions. ESS systems are substantially recyclable or reusable at end-of-life.

In collaboration with UC Irvine, a Lifecycle Analysis (LCA) was performed on the ESS Energy Warehouse(TM) iron flow battery (IFB) system and compared to vanadium redox flow batteries (VRFB), zinc bromine flow batteries (ZBFB) and lithium-ion technologies. Researchers assessed the manufacturing, use, and end-of-life phases of the battery lifecycle. Their findings were clear:

The ESS electrolyte health management system cleans and rebalances the electrolyte in real-time, eliminating the need for frequent downtime for recovery or rebalancing required with other flow battery systems.
