

Ev charger pole

Ev charger pole

EVSE designs and manufactures electric car charging stations and charging support equipment. With a full line of electric vehicle charging stations, networking options and support equipment, we create residential and public EV charging solutions that adapt to your operations.

EVSE's patented and state-of-the-art designs set us apart from other EV charging stations. Able to be stand-alone or network enabled, as well as having usage and reporting options, we have a product to fit your needs.

EVSE's flexible payment and secure access solutions for electric vehicle charging stations adapt to what's already in place with your operation. It's your property, and if you own the chargers, any revenue should go directly to your account and not an outside EV charging station operator.

Our payment modules and payment stations for electric car chargers integrate with your existing revenue collection, credit card billing, pre-paid monthly cards and secure access (e.g. gate and ticket) systems. Our solution is simple, easy and smart.

Public parking facilities, multi-dwelling communities and private residences with electric vehicles each require different charger activation controls to meet their needs. EVSE's EV charging solutions adapt to every customer's existing RFID, Proximity and Secure Access system badges and readers. This eliminates unnecessary complexity in activation by utilizing the systems your customers and employees are familiar with and are already in place.

We designed our extensive line of electric car charging products to support modular control unit options, allowing the installation of any controller on any charger. This design supports easy repair and allows you to change controls at a later date if necessary.

Our dedicated production and support team has been committed to excellence for over four decades, and our patented automatic cable management system provides ADA-compliant electric vehicle charger access with a revolutionary design unmatched by other EV charger manufacturers.

Control Module Inc. offers exceptional sales, service and support for our workforce data collection solutions, our electric car charging stations, and our fleet management systems. Our representatives are available by phone or email to address your needs.
