

# Ev charging station rebate

## Ev charging station rebate

When the Inflation Reduction Act became law in August 2022, it provided a tax credit for up to 30% of the cost of qualified EV charging property; Internal Revenue Service and US Department of the Treasury have clarified that the Alternative Fuel Vehicle Refueling Property Credit (section 30C) EV charging tax credit applies to each charging port and its functionally interdependent components;

This one simple clarification should positively impact infrastructure deployment as industry players can now more comfortably move forward with projects leveraging this tax credit; Suncheth Bhat, chief commercial officer at EV Realty, told Electrek.

The US Treasury's EV charger tax credit (which is claimed using IRS Form 8911) is limited to \$1,000 for individuals claiming for home EV chargers and \$100,000 - up from \$30,000 - for business properties. That came into effect on January 1, 2023.

In order to qualify for the 30C EV charging tax credit, individuals and businesses need to be located in an eligible census tract; The IRS defines an eligible census tract as:

any population census tract that is a low-income community or that is not an urban area. Approximately two-thirds of Americans live in eligible census tracts.

Business and tax-exempt governmental entities claiming the Alternative Fuel Vehicle Refueling Property Credit can receive an enhanced credit if they are paying workers prevailing wages and using registered apprentices to install the equipment.

The US Department of Energy and Argonne National Laboratory released a mapping tool to help individuals and businesses find out whether they're eligible for the 30C EV charging tax credit. (Note that there's a disclaimer on the map that says it's not formal IRS guidance - and neither is this article! - so when the time comes to file your taxes, consult with a tax professional to confirm eligibility.)

The Zero Emission Transportation Association's (ZETA) executive director, Albert Gore III, said, "Developing our nation's charging network is crucial to transportation electrification. As one of the principal incentives for charging infrastructure, 30C will help fill in charging gaps and attract investment to rural and lower-income communities. It will also help comfort potential EV drivers with the transition as they see more publicly available infrastructure;"

If you're an electric vehicle owner, charge up your car at home with rooftop solar panels. To make sure you find a trusted, reliable solar installer near you that offers competitive pricing on solar, check out EnergySage, a free service that makes it easy for you to go solar. They have hundreds of pre-vetted solar installers competing

The EV charger tax credit is back, thanks to the Inflation Reduction Act (IRA) — massive climate, energy, tax, and healthcare legislation. You may have heard that the IRA contains billions of dollars in tax incentives, including a tax credit for new and used electric vehicles. But the IRA also brought back the EV charger federal tax credit for electric vehicle charging stations and equipment that had expired two years ago.
