

Freetown energy storage policy updates

Freetown energy storage policy updates

Direct policy support is offered on an as-needed basis to members engaged in program, policy and regulatory development (the extent of direct policy support depends on CESA bandwidth). This support may include review and input on policies, regulations or programs under development; comments on RFPs, straw proposals and other documents in development; filings in open proceedings; and presentations to energy storage committees, legislative bodies or regulators.

Independent third-party analysis is conducted on energy storage policy, economics, markets and other topics of interest to state regulators and policymakers, as needed and depending on CESA bandwidth. Topics have included storage in energy efficiency plans; opportunities in peak demand management/winter peaking and peaker replacement; solar+storage for affordable housing and underserved communities; and policy recommendations for states.
