

# Goodwe vs Fronius inverter

## Goodwe vs Fronius inverter

Today I am back with a review and looking at Goodwe Vs Fronius solar inverters. Specifically, I am looking at the Fronius Primo Gen24 and the Goodwe DNS series inverter.

So, if you have seen our Fronius reviews, you will know just how popular and well renowned their solar inverters are in Australia. However, they aren't in everyone's price range. There are alternatives such as Goodwe's inverters that might suit some households better.

There is no one is better than the other; here. They are both great inverters. I am simply here to just review and compare the two if you are struggling to pick.

Both inverters are hot on the market right now, but which one is better? If you are planning on installing a solar system or replacing your current solar inverter, then this article will look at all the differences.

Let's start by looking at the warranty period on Fronius Vs Goodwe. Warranty is important when looking at inverters because most plan to have the inverters for a long period of time. So you want to make sure you are covered.

Fronius comes with a 7-year warranty with the ability to extend it to 20 years. Goodwe comes with a 5-year warranty that can extend to 7, 10, 12, 15, 20 and 25 years on the Goodwe DNS Series.

Although you can extend the warranty on the Goodwe, Fronius has the better upfront warranty. Fronius has one of the best warranties in the solar industry. However, 5 years is still good for Goodwe and has the option to extend if you need it.

Overall, they both come with some really strong warranties but if you look at the bankability of Fronius and how long they have been in business, I'd say their warranty carries more weight.

Goodwe is a more affordable solar inverter than Fronius. This means you will see a faster payback period on your investment. For those who are just starting out in the solar game and want something that will make a noticeable difference fast, then the Goodwe DNS series will do that.

Not only that, it is very efficient for its price range. This means you will generate more energy from your system. Goodwe inverter's efficiency ranges between 96.% and 98.3%. The Goodwe DNS Series is around 97% efficient, which is going to provide you with a lot of energy.

It is unquestionable that the Fronius inverter is much higher quality than Goodwe. This is because Fronius inverters are in demand because of how well-made and efficient they are. Particularly the Fronius Primo

range.

Of course they come with Austrian and European design. This usually means they are higher in quality and performance as they get much larger investments into the technology and research to improve the inverters.
