

Green electricity kiribati

Kiribati Green Energy Solution, a State-Owned Enterprise was established on 14 November 1984 under the Company Ordinance Cap 10A. It is a leading Government implementing agency in the energy sector deal with any renewable energy initiatives in Kiribati.

The Company aim to establish itself in leading Kiribati as the most trusted partner in providing green energy solutions as set out in its Mandates. In 2020, the reformation and renaming of the Company (commonly known then as Kiribati Solar Energy Company) was conducted with the core objective is to broaden its scope in providing services with renewable energy including solar energy, wave energy, wind energy and other RE technologies that is applicable in Kiribati.

The Kiribati Green Energy Solution headquarter office building is located in Betio, Tarawa Island. The Company currently have 3 branch office buildings located in London Kiritimati Island, Tebikera Maiana Island and Nuotaea Abaiang Island. The Company also have outlet retail store located in Bonriki International Airport, Tarawa. There is a development plan for the Company's branch office buildings to be established and reached all outer islands with the ongoing rural electrification project.

Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

In the selection box above you can also add or remove additional countries and they will appear on all of the charts on this page. This allows you to compare specific countries you might be interested in, and measure progress against others.

In the energy domain, there are many different units thrown around - joules, exajoules, million tonnes of oil equivalents, barrel equivalents, British thermal units, terawatt-hours, to name a few. This can be confusing, and make comparisons difficult. So at Our World in Data we try to maintain consistency by converting all energy data to watt-hours. We do this to compare energy data across different metrics and sources.

Electricity is a good that adds massive value to modern life: from having light at night; to washing clothes; cooking meals; running machinery; or connecting with people across the world. Many would argue that it is a crucial for poverty alleviation, economic growth and improved living standards.¹

Green electricity kiribati

Having clean fuels and technologies for cooking - meaning non-solid fuels such as natural gas, ethanol or even electric technologies - makes these processes more efficient, saving both time and energy.

Like total energy, the amount of electricity a country generates in total is largely reflected by population size, as well as the average incomes of people in the given country.
