

Grid modernization paris

The June 2018 issue of the IEEE Smart Grid Newsletter offers a glimpse of what that role is and how it may be described from three different but equally important perspectives.

It is very interesting to notice that the three articles in this issue take on the matter from the conceptual perspective, the view of a regulated path forward that can facilitate replicability, and the cost-benefit assessment aspect that ensures the viability of the smart grid paradigms at hand. Hence, as a side-note that one should take out of this issue, is that there is a thread running from idea to commercialization, which ensures that from any starting point we need to work together in the smart grid community to bring to fruition our long-term aspirations.

To view archived articles, and issues, which deliver rich insight into the forces shaping the future of the smart grid. Older Bulletins (formerly eNewsletter) can be found [here](#). To download full issues, visit the publications section of the IEEE Smart Grid Resource Center.
