The programs collaborated with Governments, external partners, and private sector to enable climate-resilient energy solutions to serve critical health needs. The programs also helped set up the Energy Access Relief Fund (EARF), a unique effort involving over a dozen public and private partners to provide energy access companies - which supply energy to millions of households and businesses - with emergency capital to alleviate financial distress caused by the COVID-19 crisis.

The Electricity Access and Efficient and Clean Cooling Programs mobilized \$20.6 m in grants to support more than \$850 m IDA financing and \$100 m of non-IDA financing across 25+ countries. Additionally, the Efficient and Clean Cooling program helped mobilize \$11 m of concessional financing from the Green Climate Fund (GCF).

EARF will continue to help off-grid electrification companies recover from the COVID-19 crisis and build and strengthen their internal capacity. This will put them in a stronger position to secure future funding from other sources. The Lighting Global and Global Mini-Grid Facility workstreams continue to support market-building activities and identify strategies to fully leverage private sector participation to improve energy access to millions of households that are still living without access to electricity.
