

# Industrial solar water heating

## Industrial solar water heating

Most commercial and industrial facilities – including food processors, bottling plants and dairies – can benefit from using solar thermal technology to preheat their hot water.

By focusing on preheating your incoming mains water, we can significantly reduce the energy used by your boilers. Harnessing heat from the sun to cut the amount of conventional energy required to heat water delivers long term financial reward, monthly energy savings, reduced operating expenses and protection against rising energy prices. It also yields significant sustainability dividends by contributing to a cleaner environment.

SunEarth has the capabilities to supply and support the agriculture industry with high-quality solar water heating systems that ensure that there is always a supply of warm water readily available.

SunEarth has been supplying restaurants of all shapes and sizes with high-quality solar water heating systems that ensure that there is always a supply of warm water readily available.

SunEarth has been supplying farms of all shapes and sizes with high-quality solar water heating systems that ensure that there is always a supply of warm water readily available.

Looking for a reliable and cost-effective way to heat water for your business? Look no further than SunMaxx Solar. Our commercial solar hot water systems are designed to meet the specific needs and requirements of businesses like yours. With over 15 years of experience in the solar industry, we have a proven track record of delivering reliable and effective solar hot water systems to commercial customers all over the world.

Our systems are engineered to reduce maintenance costs and improve the cost-effectiveness of your solar hot water system, making them a smart investment for businesses looking to save money and reduce their carbon footprint.

From feasibility studies to full project management services, our team has participated in over 4,000 projects worldwide. Find below a list our standard services we provide for both commercial and residential applications.

Our engineering services are sold in both packages and hourly rates depending on the size and scope of your project. Our aim is to deliver cost effective engineering services specifically designed for solar thermal customers.

We provide complete turnkey project management from design to commissioning of your project. Our services include utilizing existing sub-contractors or introducing new contractors to facilitate the construction of your project.

Navigating the building code and planning requirements can be expensive and time consuming. Our in-house engineering team has extensive experience in working with planning and permit offices around the world, specifically for solar thermal systems.

Have a custom project which requires a specific heat transfer station or mounting system detail? Our engineering team can help provide full construction drawings for "on roof" or "off roof" solar thermal sub-assemblies.
