Intelligent solar solutions edinburgh

Everyone's looking for ways they can save, and our energy conservation experts are on hand to help. Call us on the number below or fill out the form on this page and we'll get right back to you.

Intelligent Energy Solutions is based in Bellshill in Lanarkshire. We work on projects for clients all over central Scotland, from Glasgow in the west to all areas of Edinburgh in the east. We specialise in the installation of cutting-edge solar power solutions and battery storage. Bespoke energy solutions to reduce your energy costs.

Solar panels don't need scorching sun to function; they just need daylight. So, even on those classic Scottish cloudy days (which, let's face it, are more common here than sunny ones), solar panels still soak up enough light to generate electricity. It's like having a trusty sidekick that quietly saves you money on energy bills, rain or shine!

In Scotland, installing PV solar energy at home offers numerous benefits. Firstly, it helps reduce energy bills by harnessing renewable solar power. Secondly, it contributes to environmental sustainability by reducing your carbon emissions. Thirdly, homeowners can often take advantage of government incentives and grants, making the initial investment more affordable.

You could cut your energy bills by up to 80%. With electricity costs soaring by over 100% recently, opting for solar panels means big yearly savings on your energy bills.

The approximate installation rates and costs for solar panels in Scotland vary depending on normal factors such as the size of the system, the type of panels used, and any additional features you choose, like battery storage. On average, homeowners can expect to pay between ?5,000 to ?12,000 for a typical residential installation.

The time it takes for a solar system to pay for itself depends on various factors, including the cost of the system, energy savings achieved, and any incentives or rebates received.

On average, homeowners in Scotland can expect their solar system to pay for itself within 5 to 10 years. After that, they can enjoy free electricity and potentially earn money through feed-in tariffs or energy export schemes. The solar panels themselves have 12 manufacturer's warranty and a 30-year guarantee against loss of efficiency so you can see that over the long term, they will more than pay for themselves.

Firstly, we have years of experience and expertise in the renewable energy industry. We know what we're doing and only work with leading manufacturers (we're a Duracell Energy Platinum Partner), ensuring that only the best-performing and most reliable equipment is specified.

Intelligent solar solutions edinburgh

Secondly, we prioritise customer satisfaction. We'll ensure that we will install a system that precisely meets your requirements, not ours! We'll never specify more than you need. Our installation team are friendly and helpful and will always respect your home, leaving it as tidy as we found it.

Thirdly, we offer competitive pricing. We give you a free quotation and always offer excellent value for money, especially considering the quality of the equipment we install.

With decades of experience in traditional commercial electrical installations, we now focus on helping businesses across Scotland transition to renewable energy.
