

Ion solar corporate office

Ion solar corporate office

"This location gives us the unique opportunity of being able to communicate face to face with the thousands of locals who visit the Riverwoods on an annual basis," said Jimmy Slemboski, president of ION Solar.

"After months of searching for just the right location, this new headquarters really speaks to what ION is about. We're sitting at the base of the beautiful Wasatch Mountains, surrounded by a passionate, outdoor-loving community, where we're better positioned to have conversations about solar, answer questions and help homeowners save money while also working in our own way to preserve this beautiful state we live in.

"While ION currently employs about 350 people nationwide -- including 100 at its corporate headquarters in Provo -- the company expects to hire a few hundred more Utahns over the next several years. ION's large install area covers Utah, California, Colorado, Texas, and New Mexico.

Besides the office space, the new location will also include retail space so that homeowners can have a more conventional retail experience when switching to solar.

"This is an exciting time at The Shops at Riverwoods," said JJ Haering, director at Shops at Riverwoods, in a press release. "We are thrilled to welcome ION Solar! ION is an extraordinary company focused on making the community better, a focus of our team for many years. We know the community will find ION Solar to become another shining star at The Shops at Riverwoods."

States and Areas Served: Colorado, Nevada, New Mexico, Texas, Utah, and Virginia. Contact ION to see if they offer services in your area within each of these states.

Headquartered in Provo, Utah, ION was recently ranked #22 on the Utah Business Fast 50 List as one of the state's fastest-growing companies. ION has also been featured on the Inc 5000 list of fastest-growing companies nationwide for four consecutive years (2017, 2018, 2019, & 2020).

ION ranks #4 largest residential solar company nationwide and #2 in its home state of Utah. It has helped many homeowners install affordable solar solutions and expand their solar options. ION offers renewable energy and a pollution-free source of electricity.

For every two megawatts installed by ION, they donate a system that transforms another home into a solar-powered home. Through their ION Earth program, the company also works with non-profit partners like Habitat for Humanity to provide solar solutions for homes, businesses, schools, and shelters in need.

The installation of a new solar system typically runs about 60-90 days. Some factors may extend this

timeframe, such as city and utility authorizations, system design changes, and electrical changes to a customer's home.

ION Solar is a full-service provider for solar sales, installation, and service. Energy advisors conduct an initial screening to determine if you're a good fit for solar. If you enter into an agreement with ION, a dedicated project manager is assigned to work with you every step of the way. Design and permitting professionals will also work with a homeowner's city to ensure all installation requirements are met.

ION offers four different agreement options, including 12-year and 20-year loans, a 25-year Power Purchase Agreement (PPA), and an outright purchase. Each of these includes a 25-year inverter and solar panel warranties. A 10-year roof warranty also eases concerns about the impact that heavy solar panels will have on your roof.
