It's basically a Powerwall 3 without a power inverter. Tesla can stack this unit with a normal Powerwall 3 - adding 13.5 kWh of energy capacity with each expansion.

Not sure this will have much impact when it comes to Canada. I got a quote to install 2 PW3's in Ontario for \$43k Canadian (before tax). Allowing for the fact the transfer switch already looked to be on the wall in Tesla's video, maybe add another hour. Still seems like a massive markup for the install work involved over the price of the PW's from Tesla. Anyone get a reasonable quote for PW3 installation in Ontario or Canada?

According to this, Tesla can install a 2-Powerwall system with the expansion unit as quickly as 22 minutes versus 45 minutes for a regular 2-Powerwall installation.

The Powerwall 3, Tesla's latest home battery model, improves on the existing specifications of the previous models while still keeping the same unlimited-cycle warranty as its ancestors.

While the Tesla Powerwall 3 outshines the previous models in nearly every way, the Powerwall 2 isn't a bad pick either. In our scoring, it received at least an average rating in just about every category. It's also a good value battery because it tends to be cheaper than its competitors.

The Powerwall 2 and Powerwall Plus batteries are similar to one another -- the difference is how they interact with your home's energy system. The Powerwall is compatible with new and existing solar panel systems. It can also work as a standalone home battery without solar panels. On the other hand, the Powerwall Plus battery is integrated with a Tesla Solar Inverter. Both Tesla batteries can be installed with other brands of solar panels. You don't need Tesla solar panels to install a Powerwall.
