Largest battery storage in texas

W&aml;rtsil&aml; is a global leader in innovative technologies and lifecycle solutions for the marine and energy markets. We emphasise innovation in sustainable technology and services to help our customers continuously improve their environmental and economic performance.

ACCIONA Energ?a has signed an agreement with Qcells, a subsidiary of the South Korean industrial group Hanwha Corporation, to acquire the battery energy storage system (BESS) project Cunningham, the largest of its kind in Texas, scheduled for commissioning in the first quarter of 2023. The deal also includes the acquisition of a portfolio of over 1GW/2GWh of BESS projects at and advanced state of development.

The 190MW/380MWh Cunningham facility will be the largest operating battery energy storage project on the Texas grid upon commissioning next year. The facility, located 55 miles from Dallas, consists of 159 cabinets of 2.4MWh blocks manufactured by Sungrow and liquid-cooled cells manufactured by CATL.

The standalone battery storage facilities in this portfolio will supply power and ancillary services to the Electric Reliability Council of Texas (ERCOT), the independent system operator of most of the state. ERCOT manages the transmission, distribution and commercialization of electricity for approximately 90% of the state's electric load, one of the most active markets in storage worldwide.

All seven projects - the six under development and Cunningham - are eligible for the Investment Tax Credits (ITCs) offered by the US government to boost the deployment of renewables, increase energy security and help reduce the cost of energy under the Inflation Reduction Act (IRA).

This transaction reinforces ACCIONA Energ?a's position as a leader in utility scale storage technologies and a player in the energy transition in the United States, where it already operates more than 1GW of wind and concentrating solar power. The company also has a portfolio of four photovoltaic solar plants under construction: Fort Bend Solar (316 MWdc) and Red-Tailed Hawk Solar (460 MWdc), both in Texas; High Point Solar (127 MWdc) in Illinois; and Union County Solar (415 MWdc) in Ohio.

Battery energy storage systems (BESS) allow excess energy generated from clean, intermittent sources to be captured and released during demand peaks or system disturbances, allowing energy to be injected into the grid upon demand.

In addition, these systems contribute to reinforcing grid stability and improve energy security, offering a solution to unforeseen or exceptional situations such as Winter Storm Uri that impacted Texas in February 2021. The storm left more than three million homes without electricity supply.

Rafael Mateo, CEO of ACCIONA Energ?a, said: "We have been working on battery storage for more than 10

Largest battery storage in texas

years and we see the technology is now ready for commercial deployment and to be included in our growth strategy. This transaction is an important milestone, as it includes the biggest BESS utility scale project in one of the world's most developed BESS markets. With 1,214MW renewable capacity operating and under construction in Texas, this deal is a good opportunity for ACCIONA Energ?a to strengthen our presence and optimize the risk profile of our portfolio", he concluded.

Jae Kyu Lee, President of Qcells USA Corp, said: "Qcells is proud to provide our unique development and EPC solutions to ACCIONA Energ?a and bring this project to life, while also looking forward to furthering our collaboration as part of a long-term partnership. We are confident that these projects will benefit the entire energy sector in Texas by making clean, reliable energy more accessible for everyone."
