Largest public solar companies

Luckily, solar energy is considered the most abundant energy resource on the planet. Solar panels capture the sun's energy through the photovoltaic effect. Basically, the sun is a massive nuclear reactor, emitting huge amounts of energy to the earth.

Solar collectors gather the energy, and it can then be transferred for use. Although it's a clean, renewable, and abundant energy source, it has been slow to catch on. Luckily, the cost of solar panels is dropping, making this a more viable option for commercial and residential use.

The United States has done a lot of research into solar energy and the oldest solar power plant in the world resides in California. As attention turns to renewable energy, more states are putting resources into making solar energy a priority. Hawaii has gone so far as to say that by 2045, they will be using 100% renewably-sourced electricity.

Who are the leaders in solar energy in the United States? The following companies are making great strides in the solar and renewable energy fields. They're definitely on the rise and can expect to experience growth in the future. This list is compiled in no significant order.

NextEra prides itself on delivering clean energy across much of North America and providing sustainable solutions to changing energy needs and demands. In addition to solar power, the company also supplies wind, nuclear, and natural gas power. [Find NextEra Energy Jobs Near Me](#)

As the demand for utility-scale solar generation increases, Avangrid continues to step up to the plate and is poised to become a major player. Their vertically integrated approach creates reliable, cost-effective renewable energy products for each customer.

If you haven't heard of Avangrid before, perhaps you heard of them under their previous name, Iberdrola Renewables. While Avangrid is located in Portland, Oregon, their parent company is still Iberdrola and they are based in Bilbao, Spain.

They're a true global giant in the field and considered to have the largest renewable asset base of any company in the world. In the United States, they focus on wind, thermal, biomass, and solar generation. [Find Avangrid Jobs Near Me](#)

Relying on their experience in the sector, First Solar claims to reduce risk while delivering more reliable, dependable, and cost-effective solutions for their customers. They put their focus on research and development and taking solar technology to the next level to increase energy yield and provide a stable grid integration.

Largest public solar companies

First Solar has been in the news lately as they are overhauling their business. In early 2021, they announced that they will turn over 10 gigawatts of in-development projects to Leeward Renewable Energy.

That amounts to the majority of First Solar's project assets. They're now turning their attention toward manufacturing and producing solar panels. It will be interesting to see where this company lands in the next few years. Find First Solar Jobs Near Me
