

Libreville demand response

Libreville demand response

Ameren Missouri has partnered exclusively with Enel North America to offer commercial, institutional, and industrial, customers incentive payments for participating in a demand response program to maintain a reliable and cost-effective electric grid. Enel works with Ameren Missouri to ensure strong and dependable capacity pricing year-over-year, offering consistency and reliability to participants.

Customers in the Ameren Missouri territory are eligible to participate in this bilateral demand response program. Earn payments for committing to reduce your energy consumption temporarily in response to periods of peak demand on the grid. Your participation helps support the reliability of the local electric grid and help maintain affordable electricity across the Ameren Missouri region.

Enel has extensive experience creating reduction strategies that work within the operational limitations of a wide variety of facilities, including cold storage, manufacturing, food processing, schools and universities, malls, retail, office buildings and more. We can also help to implement full control systems that allow your electric load to be toggled remotely.

Customers often facilitate dispatch participation by simply shifting many of their energy-intensive processes by a few hours. Ask us about our experience working with customers like you.

Our experts are standing by to speak with you about your organization's demand response opportunity. Submit your information here to get a conversation started with our team.

With most commodities, value is determined by two key factors: price and quantity. But when it comes to energy, a third component - time - plays a big role. When facilities use energy is just as important as the price they pay for it and how much they use. Ultimately, a facility's ability to be flexible about when they use energy represents both a value and a cost.

Utility and grid-sponsored demand response programs allow organizations to monetize that flexibility. Demand response provides payments to large energy consumers that agree to reduce their energy demand during times of electricity grid stress to help the grid remain in balance and avoid blackouts - a win-win for both organizations looking to boost their bottom line, and the communities they serve.

Enel North America works with organizations to develop demand response participation plans that maximize earnings while minimizing operational disruption. We will work with you to identify ways to reduce non-essential energy without affecting business operations, comfort, or product quality.

We customize energy reduction strategies for every facility that can include temporarily reducing lighting, air conditioning, pumps, freezers and other non-essential equipment. Many facilities find that energy-intensive

Libreville demand response

processes can simply be shifted by a few hours to facilitate dispatch participation. In some geographic areas, facilities may participate by switching to backup generation or battery storage systems, thereby reducing demand on the grid. We will work with your facility to create a customized participation strategy that works for you.

Enel North America protects your organization from penalties and other costs associated with participation. Not all demand response companies are created equal, and with Enel North America, your priorities are our priorities. Our demand response services ensure your best interests are secured. With Enel North America, your business is protected.

Enel North America provides more access to demand response programs worldwide than any other provider. We leverage our portfolio size on your behalf to ensure market access for all customers, no matter their load profile. This is demand response that was built with organizations like yours in mind. Energy savings start with customer satisfaction, which is why the demand response services provided by Enel North America put customer needs first.

Complex processes need a simplified approach. Enel's demand response platform provides you with access to your energy reduction plan, earnings, and a real-time view into your performance - all in one place. Being able to see your dispatch performance in real-time helps you identify and address any issues to maximize your financial opportunity.
