

Lithium battery pack 170 kWh

Lithium battery pack 170 kWh

Our base level 12V Van/RV OWL System weighs less than 85(lbs) and fits in less than (2/Cubic sq. ft) of space - BUT DON'T BE FOOLED BY IT'S SMALL SIZE! Plus, if you upgrade to our 2, 3, or 4 OWL System, you'll be saving even more weight and space compared to the lead acid equivalent.

Just one included OWL Battery Pack is equivalent to (4) 12V Lead-Acid Batteries! This is our lightest, most power-dense pack designed specifically for a small footprint & high-power applications. With this system, you will be able to power virtually anything and everything you wish in (and around) your Van or RV. This unit is compatible with all 12V Solar Panels allowing you to create a truly off-grid solution for boondocking.

The AIMS Power 2000 Watt Pure Sine Wave (Model Number: PICOGLF20W12V120V) Low Frequency Inverter with built-in battery charger and transfer switch is perfect for moderate sized RVs, campsites, tailgating parties, solar systems, and much more. It will also charge your battery seamlessly when connected to shore power.

At BigBattery, safety is our top priority. Our OWL (LFP) Battery Packs use ultra-safe LFP Battery Modules with "Quad-Safety Redundancy" built into every pack. These packs include a built-in BMS, Thermal Management System, Automatic Thermal Protection and 300A Industrial Fuse making them the safest batteries you could possibly use in your rig. The battery and inverter included in this kit come with LED Voltage Displays to easily monitor your system.

With 2-3X More Power at 1/3rd the weight & size, this solution was specifically designed for your Camper Vans and RVs. Our system requires Zero Maintenance with batteries guaranteed to last well over 10+ Years! This compact system will save you space, time, weight, fuel, money and the headache of maintenance.

? Lead Acid Replacement? Intense Heat and Cold? Emergency Power? Off-Grid Power? Solar Systems? Camper Vans? Mobile Power? Power Chairs? RV's

I bought two hawk max batteries 24 volt - been using them non stop for the last two months running most of my condo- i have these batteries paired with the Victron inverter/charger and 4 Victroncharge controllers - No issues at all and with the sunny weather, my solar keeps them charged. in fact I only had to use my charger 4 times in 3 weeks due to rainy weather. I like the built in battery meter, fuse and on/off button (saves you money) - the built in battery meter matches the Victron battery meter spot on.

Big Battery helped TOWA and AGZA convert a large Greens Mower used every day at a golf course. We used Big Batteries repurposed lithium cell batteries to power this mower. Next month, July 2021 will be one year of flawless every day use saving the golf course thousands on gas and maintenance every year and quiet operations for the community. We look forward to growing with Big Battery.
