

Microgrid engineering companies

Microgrid engineering companies

Drawing insights from the Big Data & AI-powered StartUs Insights Discovery Platform that provides data on over 4.7+ million emerging companies globally, we explore the evolving landscape of the microgrid sector. This sector is marked by key trends and a substantial workforce, shaping its future. Here are some key insights at a glance:

In this section, we spotlight 10 new companies in the microgrid industry offering solutions in power generation, battery energy storage systems (BESS), predictive control systems, and more. These solutions also integrate technologies like microturbines, new battery chemistries, and reinforcement learning to enhance energy efficiency, grid stability, and system reliability. Read on to explore all the solutions that these companies provide.

Note on Signal StrengthOne of the unique metrics we feature for each company is Signal Strength, a proprietary data point generated by our Discovery Platform. It gauges the extent to which a company's influence has permeated the global ecosystem of startups, scaleups, and emerging companies. This proprietary metric serves as a valuable guidepost for understanding a company's standing in the broader market landscape.

Utilizing a SaaS platform like the Discovery Platform for identifying new microgrid companies provides significant benefits compared to traditional scouting methods:

We've explored the dynamic landscape of the microgrid domain, examining the latest trends and spotlighting exceptional companies driving innovation. To dive deeper, download our free Energy Report or schedule a demo of the Discovery Platform for a customized exploration of these groundbreaking developments. If you're an expert in startups or emerging tech, we invite you to contribute to our insights.

With a microgrid controlled by an SEL powerMAX control system, you can operate an independent power system that mitigates blackouts, optimizes operational costs, and protects people and equipment during short-circuit events.

Microgrids provide benefits to industry, municipalities, college campuses, and facilities such as hospitals, data centers, and research labs--wherever constant delivery of electricity must be assured even if the utility grid goes down.

SEL Engineering Services engineers are experts at microgrid design, specializing in power system dynamics, hardware-in-the-loop (HIL) modeling, controls, and protection. Whatever the situation or the scale, we can create a microgrid solution that meets your needs.

Microgrid engineering companies

Independent third-party evaluations--and performance in installations around the world--verify that SEL powerMAX microgrid systems lead the industry in ensuring stability and optimizing performance under a wide variety of operating requirements.

See how SELpowerMAX microgrid control systems integrate with a distributed energy resource management system (DERMS) and advanced distribution management system (ADMS) to help optimize the operational state of the wider distribution grid.

SEL is the top vendor of microgrid control systems in the Guidehouse Insights 2021 microgrid controls leaderboard report, which evaluates the strengths of the world's 16 leading microgrid control system providers.

The Guidehouse Insights leaderboard report evaluates microgrid control vendors on 12 metrics--including islanding ability, controls functionality, pricing, geographic reach, and market staying power--to arrive at composite scores for strategy and execution.
