

National grid us corporate headquarters

National grid us corporate headquarters

We are at the heart of one of the greatest challenges facing our society — transforming our electricity and natural gas networks with smarter, cleaner, and more resilient energy solutions to meet the goal of reducing greenhouse gas emissions. Every day we work with stakeholders to promote the development and implementation of more sustainable, innovative and affordable energy solutions.

Located on the roof of National Grid's US headquarters, the Waltham site generates approximately 5% of the building's energy needs. It was completed in July 2009 and has been producing power to help the Platinum-level LEED certified building minimize its environmental impact.

Here you can discover a wide range of information about the National Grid Group, including corporate governance, our annual report and accounts, how we maintain a high standard of corporate political engagement, and our corporate registrations.

At National Grid, how we do things is just as important as what we do. We maintain high corporate standards, which includes governance and the way we engage with our stakeholders.

We also aim to be transparent in everything we do, regularly reporting our financial performance and providing other corporate information that shows what we do.

At National Grid, good corporate governance goes beyond our compliance with the UK Corporate Governance Code. We know it builds an environment of trust, transparency and accountability, all of which helps foster long-term investment, financial stability and business integrity.

We also maintain a high standard of corporate political engagement worldwide. We do this by assessing and making our policies, procedures and practice visible, referring to Transparency International Guidance.

We aim to provide our stakeholders with as much information as we can about how we're performing - notably through our Annual Report and Accounts, which includes a strategic review, as well as governance and financial performance overviews.

The National Grid corporate office is located in London, United Kingdom, with significant operations in the Northeastern United States. Below are comprehensive details about National Grid headquarters, including their address, contact numbers, and a brief overview of the company. This overview includes its competitive position in the energy sector against major companies like E.ON, SSE plc, and Centrica in the UK, and Con Edison, Eversource Energy, and PSEG in the US.

At National Grid, we are committed to building a company that is always there for its customers, employees
