

Off-grid energy storage battery selection 13 kWh

Off-grid energy storage battery selection 13 kWh

Our Grid Down Redoubt Selection Tool will help you calculate the total amount of energy your home could potentially use (called the load) and then tell you which Grid Down Redoubt system is best for you.

One question we get asked a lot is: If I have solar panels, how long will it take to charge my Redoubt system? With our new calculator, you can estimate just how long it will take to charge your system using solar panels.

Our Grid Down team will reach out and assist you with any questions you may have. You will also receive a 5% discount to be used for any purchase of our Redoubt ESS systems.

Grid Down has teamed up with Lion Energy (which I have owned their Sanctuary system for 2 years now and love) To make what I think is the best Energy Storage system even better! They are making it Lightning and EMP protected and easy for the DIYer to install.

I've worked with alternative power systems for 20+ years. It's very gratifying to see industry leaders EMP Shield and Grid Down combine their products to provide the highest quality back-up power.

Many people think a generator is all they need for a disruption in electrical service. They're wrong. You need two additional things: A way to store the excess electricity and EMP protection.
