

Oman electric vehicle range

front costs and electric driving range is increasing. Automakers plan to begin selling more than 120 PEV models during the next few years and vehicles with an electric range exceeding 320 kilometers are already on the market. These include the first plug-in electric sports utility vehicles (SUVs), a popular vehicle segment in Oman.

Oman is embarking on a transformative journey towards a greener future, with electric vehicles (EVs) serving as the driving force. This ambitious vision hinges on a three-pronged approach: building a robust charging infrastructure, implementing supportive government policies, and fostering strategic partnerships.

Oman's new all-electric range lineup includes the EQA, EQB, EQE Sedan, EQE SUV, EQS Sedan, EQS SUV, and the all-new Mercedes-Benz G 580 with EQ Technology. Each model caters to different preferences and lifestyles, ensuring every customer can find an electric vehicle (EV) that suits their needs.

Omani electric vehicle (EV) maker Mays will debut its first model this year. The company will unveil the locally-developed "Alive 1" by the end of the year, which will cost OMR15,000 (\$38,964), according to a post on Instagram. The company's website says the five-seater EV can drive 510 km on a single charge. The battery can be turbo ...

Muscat: Mercedes-Benz Oman is excited to announce the arrival of the highly anticipated all-electric range in its showrooms starting September 1st, 2024. This milestone marks a significant step forward in sustainable mobility in Oman, offering customers the perfect blend of cutting-edge technology, luxury, and environmental consciousness.

"We are thrilled to bring the future of mobility to Oman by introducing our all-electric range by Mercedes-Benz," said Shaun Michael, Chief Executive Officer, Mercedes-Benz Oman. "This launch is a testament to our commitment to sustainability and innovation, aligning with global efforts to reduce carbon emissions and promote environmentally friendly transportation options. The electric range represents the pinnacle of EV technology, and we are confident that our customers will be as excited as we are to experience the future of driving."

The all-electric range by Mercedes-Benz is powered by advanced electric motors paired with next-generation batteries. They deliver remarkable performance with horsepower ranging from 190 to 658, depending on the model. With class-leading aerodynamics and a driving range of up to over 700 kilometers on a single charge for the EQS, these vehicles set new standards for efficiency and convenience.

As part of Mercedes-Benz's global sustainable business strategy "Ambition 2039," the company aims to achieve net carbon neutrality for its fleet of new vehicles over their entire lifecycle.

Oman electric vehicle range

Launching the all-electric range in Oman is a significant step towards this goal. Mercedes-Benz Oman is proud to lead the way in driving sustainable luxury forward in the region.

Customers are invited to visit the Mercedes-Benz Oman showroom from the 1st of September to experience the future of driving the all-electric range. Our expert team is ready to assist you in exploring these groundbreaking vehicles' unique features and benefits.

The company will unveil the locally-developed 'Alive 1' by the end of the year, which will cost OMR15,000 (\$38,964), according to a post on Instagram.
