

# Ovo energy solar panels

Ovo energy solar panels

We're considering getting solar panels and battery from Ovo (we're existing customers). Does anyone who's already gone down this road have any thoughts - good or bad - on how it's going for them? Thanks!

We have had solar PV since 2012 and it has been a very useful investment. Obviously at that time the installation wasn't via OVO but you should find some MCS registered installers locally to compare. I would also always recommend batteries as the solar generation never matches your usage and so it's better to make use of all your solar power

I would actually suggest that in the very near future, because of increasingly interesting tariffs, that a household battery is almost more relevant than solar panels!

I can reassure you on one thing: after a decade or two of solar panels becoming ever more widespread in all parts of the UK there are no longer any myths or unanswered questions about productivity, the effect of differing annual solar irradiation figures in different parts of the Country, reliability of the kit, etc. etc.

Good luck....and get good reputable advice, remember there's no such thing as daft questions, only daft answers! But ultimately friends, neighbours, colleagues who already have solar panels are a good first port of call....plus the OVO forum of course!

We are indeed Ovo customers, living in the PE7 postcode area (edge of East Anglia) so the weather is generally drier / brighter than many other areas. Roof shape / angle / orientation are near-perfect. We're looking at a 9kW battery + 12x 440W panels from Ovo. Total electricity usage in 2023 was 7838kWh (= high, not least because my disabled husband and I are at home pretty much 24/7/365).

I am particularly interested to know if anyone has already used Ovo's own solar setup service, recently promoted. It sounds well worth considering, and the incentives seem pretty generous - at least to begin with...!
