Pacific power renewable energy program

PORTLAND, Ore. -- Thanks to over 79,000 residential and business customers who choose Pacific Power's Blue Sky renewable energy, the popular program ranks third in a national study by the U.S. Department of Energy's National Renewable Energy Laboratory (NREL).

The NREL recently released its ranking of leading utility green power programs based on 2019 data. For the 18th consecutive year, PacifiCorp's Blue Sky program - which includes Pacific Power and Rocky Mountain Power customers - is being recognized.

"One-by-one our customers are choosing to make an impact by supporting additional renewable energy and local community projects through Blue Sky," said Cory Scott, managing director of customer solutions. "We're immensely proud of our Blue Sky program and participants for achieving this national recognition. Their ongoing support allows us to continue growing the program as we have since 2000, when we became one of the first utilities in the nation to make voluntary renewable energy options available."

Pacific Power Blue Sky participation consistently increases about 6 percent year over year. Continual growth is anticipated in the future as increasing numbers of customers choose to support renewable energy.

"Our Blue Sky participants voluntarily support our program to help bring renewable energy awareness into the forefront of everyday life and lead the way toward a more robust renewable energy future," said Scott.

Blue Sky allows customers to match their energy usage with the purchase of renewable energy credits (RECs). It's a simple way for participants to support new renewable energy in the West, above and beyond PacifiCorp's substantial and growing commitment to renewables.

Funds from Blue Sky participants' support has allowed Pacific Power to partner with community organizations to fund more than 130 local renewable projects over the years. These projects have helped community organizations save money on electricity costs and further invest in their missions.

The Top 10 utility green pricing program listing is compiled by the NREL in the following categories: total sales of renewable energy, total number of customer participants, customer participation rate, green power as a percentage of overall sales, price premium and percentage of solar energy.

Blue Sky funding awards can help to cover the capital costs to install qualifying, new renewable energy systems for non-residential sites in Pacific Power's service area.

Schedules and the availability of funds are subject to change. Please note: Submitting an application by the published deadline and meeting the eligibility criteria does not guarantee funding.
