

Poland solar energy for homes

Poland solar energy for homes

The sixth edition of the Polish government's residential solar and storage rebate scheme is now open, with a total budget of PLN 400 million (\$103.2 million). Applications will be accepted until Dec. 20, or until funds are exhausted.

Poland's National Fund for Environmental Protection and Water Management has opened applications for the sixth edition of its Mój Prąd (My Electricity) rebate scheme.

Net-billing prosumers who incurred installation expenses after Jan 1, 2021, are eligible. The maximum subsidy available for solar without storage is PLN 6,000, increasing to PLN 7,000 for solar micro-installations with storage.

Any solar installations connecting to the grid after Aug. 1 must be paired with electric storage facilities and/or heat storage facilities to be eligible. The installations can range from 2 kW to 20 kW in size.

The budget for the latest edition of the scheme totals PLN 400 million, with financing coming from the European Funds for Infrastructure, Climate, Environment program.

Poland added around 4.6 GW of solar in 2023, taking its cumulative installed capacity beyond 17 GW. The country transitioned from net metering to net billing for its micro-installation market in mid-2022.
