

Purchase your own solar panels

Purchase your own solar panels

We work with a panel of solar experts to create unbiased reviews that empower you to make the right choice for your home. No other site has covered renewables as long as us, which means we have more data and insider information than other sites.

Home and business owners typically purchase solar panels through solar companies, which are certified to deal and install products from top manufacturers. These solar installers then plan and execute the installation, and many monitor the system afterward for proper functionality.

However, solar panels and solar panel kits are also sold directly from distributors in the event you're qualified to carry out your own DIY solar installation. Consider the following when making a decision about where to purchase your panels.

SunPower designs and installs industry-leading residential solar and storage solutions across all 50 states. With a storied history of innovation dating back to 1985, no other company on this list can match SunPower's experience and expertise.

SunPower earns its position as the top national installer on our list for a handful of reasons: It installs the most efficient solar technology on the residential market, topping out at 22.7% efficiency, offers the most expansive service area through all 50 states and backs its installations with a warranty well above the industry standard -- 40 years, as opposed to the industry standard of 25. All the while, SunPower pioneers sustainability efforts within the industry.

If that weren't enough, SunPower systems come packaged with products all manufactured in-house by its sister company, Maxeon. This means that your panels, solar cells, inverters, battery and EV chargers are designed to work together and are all covered under the same warranty.
