

Renewable electricity manila

Renewable electricity manila

The government has committed to raising to 50% the contribution of renewables of its total electricity generating capacity, with 15.3 gigawatts (GW) by 2030. The move would help the country in its commitment to reduce its carbon emissions by 75% by 2030.

"The harnessing and utilization of renewable energy comprises a critical component of the government's strategy to provide energy supply for the country. This is evident in the power sector where increased generation from geothermal and hydro resources has lessened the country's dependency on imported and polluting fuels. In the government's rural electrification efforts, on the other hand, renewable energy sources such as solar, micro-hydro, wind and biomass resources are seeing wide-scale use."
