

Renewable energy events

Renewable energy events

Born and raised in Madrid, went to the German school and spent 1 year in Germany as a teen. I completed my BA International Studies in The Netherlands and I consider it my second home.

After my studies, I worked for several years abroad and then finished an MBA in International Management. Before joining RaterPower I worked for a year in Germany.

With the start of the new year, we've got another 12 months of exciting renewable energy innovations to look forward to. And with the technology progressing rapidly, there is no telling what 2024 holds in store.

The best place to find out about the latest innovations and technologies and connect with prospective clients and colleagues in the industry is at one of the many renewable energy events happening in 2024. In this blog, we'll be taking a look at some of the renewable energy events (with a weighting towards solar events given our sector) we're most excited about this coming year.

After a hugely successful first year in 2023, Pulse is back! Held by RatedPower, this year's event will be even bigger and better than last, with a whole host of keynote speakers and talks alongside hands-on technical workshops with leaders from all across the renewable industry.

There will also be another networking dinner, allowing attendees the perfect opportunity to network with fellow industry professionals, share ideas, and make new connections. Pulse 2024 promises to be the number one renewable energy event next year and we hope to see many of you there!

Intersolar Europe is one of the world's leading exhibitions in the solar industry, and it has been running for over 30 years. The event's tagline is "Connecting Solar Business," as it brings together solar manufacturers, service providers, project developers, start-ups, planners, suppliers, distributors, and installers to network and discover the latest trends across the industry. Over 115,000 attendees and at least 1,370 exhibitors are expected to join the 2024 conference. There are also corresponding Intersolar events held in North and South America.

Following the success of the first independent KEY Energy event last year, the conference returns to Italy in 2024. The conference promises to be a keystone event for the renewable and energy transition markets of Southern Europe, Africa, and the Mediterranean. Packed full of talks, debates, and workshops, last year's event boasted over 33,000 attendees, and this year's event is expected to be even bigger.

Genera is an event backed by Instituto para la Diversificaci?n y Ahorro de la Energ?a (IDAE) a public body dedicated to saving and diversifying energy. It brings together 35,000 attendees from over 63 countries to share their take on key trends, innovations, products, and services in energy, decarbonization, electrification, and the environment. With over 400 exhibitors and a packed schedule of industry talks it attracts delegates

from all areas of the energy market.

The Future of Utilities conference brings together renewable energy leaders with over half of the attendees holding C-suite positions, making it one of the top networking events of the year. With a timetable focusing on the clean energy transition and a full schedule of talks, workshops, and dedicated networking time, this event has something for everyone.

The International Conference on Renewable Energy and Sustainable Energy (ICRESE) brings together experts and professionals from the renewable energy sector for a 3-day event in Paris. The focus of the conference is driving the energy engineering and applications space forward, with talks, workshops, and networking events for attendees.

Underlining Bilbao's claim as a European and global renewable energy hub, the Energy Tech Summit is an influential event for the industry. The event focuses on renewable technologies and securing resources for the transition to green energy and will hold a full suite of talks, innovation workshops, and networking opportunities.
