Residential solar power solutions phoenix

The data on this page comes from real solar quotes to real solar shoppers on the EnergySage Marketplace. We give you access to transparent information so you can confidently make informed energy decisions. Learn more about how our Marketplace works and how we make money.

Any major home improvement project requires a skilled contractor. Solar's no different. In fact, choosing a high-quality solar installer is crucial to getting a system that actually performs well and saves you money.

Ranking solar companies is our bread and butter. We screen every solar company before allowing them to join our platform to ensure they'll deliver top-notch installations. With that in mind, here's our ranking of the top five solar companies in Phoenix, AZ based on ratings, reviews, and more.

Our Marketplace has provided hundreds of thousands of quotes to homeowners from solar installers across the country--so we have the data to help you find the best one for you in Phoenix, AZ.

The ranking system includes four tiers of installers: Approved, Advanced, Elite, and Elite+. If a solar company doesn't meet the Approved criteria, they aren't allowed to join our Marketplace.

High-quality installers care about their reputation. They want to install equipment that performs well and will last a long time. If you get quotes with equipment that you can't find much information about, that's a red flag.

To get a sense of whether the equipment is trustworthy, first make sure it's included in EnergySage's solar panel, inverter, or battery equipment guide--and then see how we rate it relative to other equipment.

You can also check to see if the installer has any manufacturer endorsements, which attest to their expertise installing that brand's products. Most manufacturers require installers to go through a vetting process to ensure they're appropriately licensed and qualified before handing them an endorsement. The endorsements often come with perks that are passed onto customers, like preferred pricing or extended warranties.

In the unlikely event there's an issue with your solar panel system, it's important to know who to call. Multiple warranties come with your solar panel system, including manufacturer warranties for the various equipment and your installer's workmanship warranty.

The workmanship warranty covers all the labor your installer performs. It's typically somewhere between one and 10 years. But make sure to read the fine print because sometimes there are exclusions: You don't want to be stuck with a hefty bill if your installer needs to come out to check on or replace some equipment.

Residential solar power solutions phoenix

Solar is a growing industry that attracts contractors from many backgrounds--sometimes only loosely related to solar. But to feel confident in your solar panels, you'll want to work with an installer that has plenty of experience in custom designing systems.

At EnergySage, we verify that all installers have at least two to three years of legitimate experience designing and installing solar panel systems before we let them join our Marketplace. We also confirm they have multiple successful installations under their belt.
