Our team owns a unique knitting patent and know-how, that allows us to produce smart textile in mass production. We believe, we can change the status quo, developing smart textile products and make them available to everybody.

We have developed the latest modification of the growth method for a wide range of perfect (ideal) single crystals with new properties.- Crystals are the most demanded, expensive and scarce part of modern devices because of the complexity of their preparation, associated with numerous know-hows.- A crystal is a device in itself. A crystal can generate a laser beam, detect ionizing radiation, convert sunlight to electricity, and much more.- The need for new single crystals with high perfection and improved characteristics is always increasing.

Automated anilox roll cleaning service. We are on a mission to reduce chemical usage in the printing industry. The anilox cleaning solutions market offers only high-cost technologies, such as high-speed laser machines, high-pressure cleaning machines, and ultrasonic baths. Which implies a strong involvement of the customers' resources into the cleaning process. Crystalline is the first HaaS solution on the market, a symbiosis of unique technologies in the simple item with guaranteed of the qualified service.

TiO₂ coated photocatalysts, which under the influence of sunlight (without any other energy input) are able to degrade organic compounds such as phenol, oil refining residues, paint processing residues, antibiotics and other medical organic compounds (waste substances) in wastewaters as well as ballast waters from ships

Riga specific companies and products

velopment of protective coatings in the transport, aviation and space industry.

WeedBot is a technology company that builds high precision weeding systems for conventional and organic farmers. We use machine vision to distinguish between weeds and crops. Our equipment is most suitable in early growth stages when high accuracy is necessary to avoid damage to crop seedlings.
